
CE efficiency values by compact-object type
Hydro / simulation estimates of $\alpha_{CE}$:
Hirai et al. 2022 (12 + 1.4 Msun): $\alpha \gtrsim 10$ (12 + 1.4 Msun) ($\rightarrow \sim 20$)
Hirai et al. 2022 (12 + 3 or 5 Msun): $\alpha \gtrsim 10$ ($\rightarrow \sim 10000$)
Fragos et al. 2019 (NS + 12 Msun): $\alpha \approx 5$
Law-Smith et al. 2020 (NS + 12 Msun): $\alpha \approx 0.1$–$2.7$
Observational (individual systems):
iPTF13bvn (Hirai 2017): $\alpha \gtrsim 20$
IC 10 X-1 (Wong et al. 2014): $\alpha > 3$ (Webbink)
IK Peg (Davis et al. 2010): $\alpha \approx 3$
M33 X-7 (Valsecchi; Moreno-Mendez): efficient ejection required
Cyg X-3 (Zdziarski et al. 2013): $\alpha \approx 1$–$2$ (dep. on $\lambda$)
LMC X-3 (Valsecchi et al. 2010): $\alpha \approx 0.6$–$1$
Observational (population / statistical studies):
Kruckow et al. 2018 (massive bin.): variable / structure-dep.
Kruckow et al. 2021 (massive bin.): variable; $\alpha < 1$ many
Linden et al. 2009/2010 (HMXBs): $\alpha \gtrsim 0.5$
Chattopadhyay et al. 2020 (DNS): moderate $\alpha$
Shao & Li 2014 (HMXBs): $\alpha \approx 0.5$–$1$
Fragos et al. 2019 (HMXBs): $\alpha \approx 0.5$–$1$
Andrews et al. 2015 (Gal. DNS): $\alpha \approx 0.5$
